Computerized Visual Acuity System

DonD®

DonD®

A complete digital visual-acuity workflow

- Calibrate the software for the selected monitor size.
- Use Snellen and logMAR scales, Sloan letters or the alphabet from A to Z.
- Select letters, numbers, Landolt rings, Pigassou and Rossano figures, Ishihara plates, the Lancaster wheel, DuoChrome or custom images.
- Use software and keyboard shortcuts to access the examination resources.
- After selecting an optotype, adjust contrast from 100% (black optotype on a white background) to 0% (white optotype on a white background).

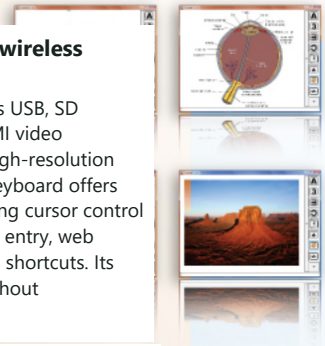

Flexible installation

The universal display support accommodates different monitor sizes. The system may be placed on a desk or mounted on a wall. The compact PC has its own support and can be mounted behind the display or placed discreetly on the desk.

Compact computer and wireless control

The supplied mini-PC provides USB, SD memory-card, audio and HDMI video connections for compatible high-resolution monitors. The wireless mini-keyboard offers standard PC functions, including cursor control through its touch surface, text entry, web access and DonD examination shortcuts. Its stated range is up to 30 m without obstructions.

Contact EVOptica or your distributor for demonstrations, quotes, room planning and support.

DonD supports different types of visual-acuity examination. The software can be adjusted for small or large rooms and for different monitor sizes. Its Windows platform permits software upgrades and other compatible computer tasks.

DonD combines a digital display, a compact Windows computer, a wireless mini-keyboard and installed visual-acuity software in one examination system. The software can be calibrated for different display sizes and examination distances.

Configuration note: operating system, display size and supplied accessories above describe the archived brochure configuration. Confirm the supplied configuration with EVOptica. The source pairs 20 ft with approximately 7 m; both are retained as printed rather than silently changing the stated examination distance.

The documented DonD configuration includes a 22-inch Full HD LCD, a Windows 7 mini-PC, wireless mini-keyboard and installed software.

A universal display support allows desk or wall installation. The compact computer fits behind the monitor and supports compatible screen sizes.
